

**MOTO RIDER SAFETY AWARENESS
TRAINING****COURSE OVERVIEW**

The course is designed to equip riders with the advanced skills necessary to operate a Scooter, Moto, or Motorcycle with competence and professionalism in any situation. Participants will gain a thorough understanding of the key principles of road safety, defensive riding techniques, and effective handling in various conditions. The primary goal is to ensure riders' safety, the safety of other road users, and the protection of organisational assets, whether they are riding in urban, rural, or challenging environments.

The training will be delivered through a combination of both theoretical and practical modules. The theory portion will cover essential topics such as traffic laws, risk management, road awareness, and emergency procedures. Meanwhile, the practical training will allow riders to apply these concepts in real-world scenarios, focusing on vehicle control, hazard perception, and advanced manoeuvring techniques.

ELEMENTS OF COMPETENCY

- a) Appropriate safety gear and correct use
- b) Driver awareness and condition to work including company policy requirements
- c) Roles and responsibilities of a rider
- d) Road safety concepts
- e) Cambodian National Road Laws (Each student will be provided with a copy of the law book)
